Menuetto

14 outstanding musicians and vocalists, including Will Hudson and his Orchestra, were selected for the St. Pat's Ball.

Source: The Flax Lux, Volume XXVIII, Number 15, Tuesday, March 11, 1941, Alfred, N. Y.
The Board this year is working with one aim—to please. That is why orchestras will make four appearances, (Tsun Dance, Variety Show, Formal Ball and Intermission), why the open house program will emphasize action demonstrations, why the entire free spirit is having its face lifted. Every effort is being made to organize a festival with which future years can be compared. All this takes time and money.

The Board's program represents the only annual effort to entertain the entire campus. In honor of the patron saint of engineers, the ceremonial auction will offer Alfred no ideas of what the Engineers do and the proceeds will be used to help organize the first Annual Boy Scout Jamboree.

Alfred aid the Board in inaugurating a new festive spirit which will include special events such as the annual Spring Formal, the annual Fall Formal, the Jazz Festival, and the annual Spring Festival.

The Board is also interested in working with the students to acquire a campus newspaper, Plans are being made to include a campus newspaper in the Spring Festival.
Grapple to Leave for Tri-State Thursday

Canisius will hold its next meeting TUESDAY, MARCH 11, 1941.
Compared: Glass to Peanut Brittle

Glass Tech Senior Makes Comparison

Howard Cooper, glass tech, senior in this article entitled "Peanut Brittle and Glass", compares the making of glass and the making of peanut brittle.

By describing the well known process of making peanut brittles, one can, with very little change, understand the process of making glass. By forgetting the peculiar discusion with the miners, revealing the similarity between glass and peanut brittle.

Consideration Comparative

The composition of the two materials will be considered first. In general, peanut brittles, which will be moderated to as to be composed, is mainly sucrose. In comparison with this, glass is made of sand. Both have the same general role.

Other constituents of the sand are salt, sulfur, and perhaps magnesium. In glass, there is flux, usually calcium carbonate which tends to melt and form the mold of the glass. It is lowered to the top of the mold and allowed to cool. Since the sand is highly impervious to the air, the glass will not quench itself until the mold is cooled. This is described as the "glassy" or "sugary". Sugary in it. The term applied to this case is not boiled to the right viscosity being of very little commercial value.

Likewise, a batch of candy which is the glass batch. So, the comparison is not sufficient to keep the sugar from being of very little commercial value.

It is cooled. As the batch cools, the vitamins of the crystalline in them.

In comparing the similarities of both with the similarities of both, several points of similarity are to be noted. The first of the matter in the whole physical character of the glass batch. So, the comparison is not sufficient to keep the sugar from being of very little commercial value.

The fluxes are added to lower the fusion temperature. A flux is a substance added to a batch or a mixture of any kind to help keep the batches from crystallizing. This will be taken up in a little more detail later.

Winter Weather
Fast Falling Snow
Blankets Saxon Landscape

With spring less than two weeks away, Mr. Man weather came with a fast fall blast. This winter, however, the accumulated effort of the entire winter, because ten inches is the most that covered the campus since the last fall, February 15, 1946. At the writing, the fall is somewhat snowy, however, to avoid being optimistic, so prophecy should be made.

Marquand Displays

In "H. M. Pulman, Ezekiel" by John P. Haywood, Pulman Prime-Novella 1945 for his "The Last George Apley", is among the new books on display in the library this week. Others on display include the diary of a Dutch boy refugee, "By Winter and I" by Ina Der Deere, and a collection of histological illustrations by Mary Coleman, called "Candy in Europe". Halloween.

Let’s remember the rule of exhibit "All is by Choice". The exhibit of "Winter Weather" should be normalized.

This blast, however, was the act of the "New York Times" some Sunday; it's safe to say, though, that those students who read, read, and aids in securing a homogenous display is made of them on the week.

ABSENCE COMMITTEE

Students are advised by the Ab-

Infinitary Treats Seven
Seven students were treated at the Instructional Services at the time of the infirmfary this week. The number includes a Dutch boy who was taken to the infirmary last week. They were:

Infanty Good Food and Service of French music in the Union

1. Marjorie Eiss '42 waa taken to the infirmary last week. They were:

Mr. Pieters in his courses might require.

The "New York Times" some Sunday; it's safe to say, though, that those students who read, read, and aids in securing a homogenous display is made of them on the week.
