The New York State School of Clay-Working & Ceramics,
Alfred University,
Alfred, N.Y.
Attention Prof. Chas. F. Binns.

Gentlemen:-

Replying to your favor of the 1st, wish to say that after the students get a little bit used to handling the Gaskets and after the Gaskets have been used for a little time, you will find them to be far better than the flat ones that you mention, because these Gaskets eventually take on the shape of the Cover and cling to it without any difficulty.

The flat Gaskets that you mention we have not used for more than twenty years. They all came from Germany and we had considerable trouble with them because they deteriorated, they were too thick, and consequently we adopted the form of Gaskets which were supplied you and which are in use in hundreds of establishments throughout the country.

Yours very truly,

PAUL O. ABBÉ INC.

This modern and up-to-date plant is devoted exclusively to the construction of our Superior lines of Special Mills and Mixers.

[photo]

Our machines are built in quantity, by specially trained mechanics, year in and out. Our prices are as low as high-class material, thorough workmanship and quantity production can make them. We back' them with the 23 years' experience of our President and the 40 years experience of our Vice-President. Our motto is and will be "Quality First and Always". We consider a satisfied customer our greatest asset, and our continuing tremendous success warrants us in believing that "Perseverance Conquers".

Remember "Abbé" and "Best" are synonymous.

We have no connection with any other firm and this is the only corporation having an original Abbé actually and actively connected with it.
