

DEPARTMENT OF THE INTERIOR
BUREAU OF MINES
MINING EXPERIMENT STATION

COLUMBUS, OHIO, August 10, 1921

Professor Charles F. Binns, Director,
New York State School of Clay Working and Ceramics,
Alfred, New York

My dear Professor Binns:

I have been appointed on an investigation in co-operation with the National Research Council on molding sands. I recall talking with a man at your home who was from Niagara Falls. I believe that he was with the Atcheson Graphite Company. Do you remember his problem and are you free to state it or would you prefer to give me his address and I will get in touch with him? I am also doing work on oxidation; this investigation is being carried out in agreement with the Heavy Clay Products Association. If you have anything to offer along this line either as to the needs or or procedure to a solution of the problem I would be glad to hear from you.

I am expecting Rose tomorrow morning and we will proceed at once to a location of a place to live.

Please remember me to Mrs. Binns and the girls.

Very truly yours
