

**Environmental speaker series guest will discuss his company's water filter project for the needy**  
9/08/14

Nick Rozard, a ceramic engineer, will present “Water Filters From Our Village, How Triton Ceramics and the Alfred Community Support World Peace” as part of Alfred University’s (AU) Environmental Studies Speaker Series. Rozard’s lecture will take place on Friday, Sept. 12 at 12:20 p.m. in the Roon Lecture Hall (Room 207) of the AU Science Center. The talk is open to the public free of charge.

Triton Ceramics, located in the village of Alfred and inspired by an AU trio, focuses on bringing silver-treated ceramic water to needy people. Currently, Triton Ceramics is in the research phase.

Rozard is an alumnus of AU who started working with ceramic filters prior to his graduation. Since then, he has traveled to Indonesia with his company Triton Ceramics, where he worked in the production of water treatment devices.

The environmental Studies Seminar series at Alfred University is held every Friday during the fall semester when the University is in session. Sponsored by the Division of Environmental Studies within Alfred University’s School of Liberal Arts and Sciences, the series brings a range of speakers to the campus, including scientists, activists, and policymakers, with the mission to better understand our environment and what we can do better to sustain our world.
