Prof. Chas. F. Burins

Alfred

Dear Professor,
Your letter
at hand some time ago.
I am just returned from
an interview with some
parties who contemplate
taking up the crumbs of
our Carbon plant; and being
my friends seem to favor
seeing me safe in order
to retain my services there.

But the mortgage held
by Mr. Slylock comes due
the 6th of April and

my situation is this:
If these parties conclude
between now and then to
take hold and meet the
mort-gage when due, I
will be settled. If they
don't and the plant goes
I will be one more experience
wiser and poorer.

I can not therefore say
whether I could take up
a proposition or not until
March 15th to 25th. I
will say however that in
case I have here at Canton
that I would in deed
like to build a stoneware
plant in Pennsylvania.
I will await with inter-

ent your paper on B_2^{03} .
I have a cross also to pick
on R_2^{03} in the formula.
So if I ever get settled
so I can work decently
I am going to shatter
your theories or mine.

Yours very truly
Paul C. Cox.

I have enjoyed some gray
work in stoneware here. I
have a great deal to
deal with and I have
been interested by the vari-
ations on Purdy's ideas
that develop under different
circumstances.
